FOREWORD: MEETING THE COGNITIVE AND BEHAVIORAL HEALTH CHALLENGES OF THE ELDER BOOM IN NEW YORK STATE

• The Geriatric Mental Health Alliance of New York has assembled this document to provide demographic and epidemiological background information for policymakers, advocates, journalists, and others who are concerned about the mental well-being of older adults in New York State during the “elder boom”.

• Unfortunately, people with dementia, mental illnesses, and/or substance use problems and their families often do not get the services they need due to service shortages, limited access to services that exist, uneven quality of care, limited integration of services, limited continuity of care, workforce shortages, and more.

• Unmet cognitive and behavioral health needs can result in avoidable individual and family suffering as well as in premature death and disability, excessive institutionalization, and very high health care costs.

• To meet the cognitive and behavioral health needs of older adults in New York State it will be necessary to:
  • Expand current services to keep pace with population growth.
  • Take bold steps to improve services to overcome current service shortfalls.

• Keeping pace and improving care will depend on the availability of data to inform planning and policy development. This document is a small step towards gathering the needed data.

DEMOGRAPHIC DATA ABOUT THE AGING POPULATION OF THE UNITED STATES
By 2040, The Proportion Of Adults 65+ In NYS Will Increase 5% While The Proportion Of Working Age Adults Will Decline 4%. Older Adults Will Outnumber Children.

In NYS Over The Next 20 Years The 65+ Population Will Grow By 1 Million (Nearly 30%) And From 17% To 22% Of The Total Population

Population of Older Adults Ages 65+ in New York State: Projection 2020-2040

- 2020: 3.5 Million (17%)
- 2025: 4 Million (19%)
- 2030: 4.3 Million (21%)
- 2035: 4.5 Million (22%)
- 2040: 4.5 Million (22%)

In NYS Over The Next 20 Years People 85+ Will Increase By 375,000 (About 75%) And From 2% To Over 4% Of Total Population

The number of males per 100 females declines sharply at older ages. For those 85+ there are almost 2 females per male.

The U.S. population is growing older, and the gender gap in life expectancy is narrowing. PRB. (n.d.). Retrieved February 27, 2022, from https://www.prb.org/resources/u-s-population-is-growing-older/#:~:text=The%20Sex%20Ratio%20at%20Older%20Ages%20Is%20Narrowing&text=The%20Census%20Bureau%20projects%20that%20the%20Sex%20Ratio%20in%202020,Census%20Bureau's%20projections%20for%202020.
Black, Indigenous and People Of Color In The U.S. Will Increase From About 25% To About 45% Of The Older Population Over The Next 40 Years

Racial and Ethnic Mix of Adults 65 and Older: 2020 and 2060

Approximately 10% of older adults live in poverty, varying from 7% for white older adults to 20% for black older adults.

20% Of Older Adults Work For Pay ¹
25% Work As Volunteers,² With Numbers Growing

The Vast Majority Of Older Adults Live In the Community

Approximately 28% live alone in the community

Living Arrangements of 65 and Over Population: 2016

About 25% Of Older Adults (50%+ of those 85+) Need Assistance With Daily Activities. Over The Next Decade In NYS, This Population Will Increase By 200,000.

Family Caregivers Provide Most Care For Older Adults With Disabilities

80% of older adults in the community with long-term care support service needs receive care from unpaid caregivers.¹

- In 2017, the national economic value of informal caregiving for older adults was estimated to be over $470 billion annually.²
- In 2019, the average out-of-pocket spending for family caregivers was $7,200 per year.²
- The estimated total opportunity cost of forgone earnings was about $67 billion in 2013. Costs would increase to $132-$147 billion based on the projected growth of the total population of disabled older adults in 2050.³
- Family caregivers are at high risk for mental and physical disorders. (See slide 49).

About 1/4 Of Older Adults Are Socially Isolated More than 1/3 Are Lonely

Social Isolation – a lack of social connections. Loneliness – the feeling of being alone, regardless of the amount of social contact a person has. Social isolation can lead to loneliness in some people, but not in others.

Both contribute to physical and mental disorders, disability, and premature mortality.

Use Of The Internet, Widely Viewed As An Antidote To Social Isolation, Decreases With Age

10-15% Of Older Adults In The U.S. Are Victims Of Mistreatment 1, 2 And At Elevated Risk For Psychological And Physical Conditions 1, 2, 3

- Elder abuse, by definition, is committed by a person with caregiving responsibilities, including family members, home health aides, and long-term residential care staff. 1

- Estimates of the amount of elder abuse vary. CDC estimates about 10%. WHO estimates over 15%.

- Elder abuse “can lead to early death, harm to physical and psychological health, substance misuse, ruptured social and family ties, social isolation, and/or devastating financial loss....” 3

About 51% Of Veterans In NYS Are 65 Or Older

COGNITIVE AND BEHAVIORAL HEALTH PROBLEMS OF LATER LIFE
There Are Various Types
Of Cognitive And Behavioral Health Conditions

- Alzheimer’s Disease and Other Dementias
- Severe and Persistent Mental Illness
- Late-life Psychotic Conditions
- Severe Anxiety and Depression
- Mild or Moderate Anxiety and Mood Disorders
- Substance Misuse
  - Misuse of alcohol, prescription drugs, and over-the-counter medication
  - Misuse of illegal substances
  - Addictions such as gambling
- Autism and other Developmental Disabilities
- Lingering cognitive and psychological effects of illnesses, such as COVID, and injuries, such as traumatic brain injuries (TBI)
- Neuro-psychiatric Symptoms Associated with Neurodegenerative Disorders Other Than Dementia, Such As Parkinson’s Disease
Types Of Cognitive And Behavioral Health Conditions (Continued)

• Co-Occurring Disorders:
  
  o Dementia With Behavioral Disorders  
  o Behavioral Health Conditions With Acute and/or Chronic Health Conditions  
  o Mental With Substance Use Disorders  
  o Developmental Disabilities With Dementia and/or Behavioral Disorders  
  o Other Neurodegenerative Diseases (such as ALS) With Behavioral Health Disorders  

• Emotional Distress In Reaction to Adverse Life Events Such As The Pandemic  

• Developmental Challenges of Old Age
Cognitive And Behavioral Health Disorders Are Highly Prevalent Among Older Adults

Annual Rates of Cognitive and Behavioral Health Disorders

COGNITIVE IMPAIRMENT AND DEMENTIA
There Are Several Types Of Dementia: Alzheimer’s Disease Is The Most Common

- 5 most common types of dementia:
  - Mixed dementia (a combination of two or more types of dementia)
  - Alzheimer’s disease
  - Frontotemporal dementia
  - Lewy body dementia
  - Vascular dementia

- Other conditions known to cause dementia/dementia-like symptoms:
  - Argyrophilic brain disease
  - Creutzfeldt-Jakob disease
  - Huntington's disease
  - Chronic traumatic encephalopathy (CTE)
  - HIV-associated dementia
  - Parkinson’s disease

The Prevalence Of Dementia Increases With Age

Annual Prevalence of Dementia Among Older Adults by Age

- 3% for 60 to 74 years
- 17% for 75 to 84 years
- 38% for 85+ years

98% of People With Dementia Have Co-Occurring Mental and/or Substance Use Disorders

BEHAVIORAL HEALTH CONDITIONS
There Are Various Types of Behavioral Health Disorders

• Anxiety Disorders
• Depression and other mood disorders
• Psychotic disorders
• Substance misuse and other addictions
  • Alcohol Overuse and Dependence
  • Medication Misuse
  • Misuse of illegal substances
  • Gambling
Annually, Approximately 20% Of Older Adults 55+ Have A Mental Disorder

Proportion of Older Adults With or Without a Mental Health Disorder

- 20% Diagnosable mental health disorder*
- 80% No diagnosable mental health disorder**

* Many people with a diagnosable disorder have not been diagnosed.
** Many people without a diagnosable disorder suffer from emotional distress.

50% Of American Adults Experience A Mental Or Substance Use Disorder In Their Lifetime

## There Are Various Types Of Mood & Anxiety Disorders

Major Anxiety And Depressive Disorders
Can Have Serious Consequences

• Increased risk of dementia
• Increased risk of disability and premature death due to physical illnesses
• High rates of suicide
• Problems in relationships, loneliness, and isolation
• Reduced productivity
• Reduced engagement in pleasurable and/or meaningful activities
• High rates of substance use disorders
• Higher rates of nursing home admissions than those with dementia alone

From 2016-2020 The Rate of Suicide In New York Varied With Age, Peaking With Men 85+

In 2019, 50% of all completed suicides in the U.S. involved guns, but of older adults who died by suicide, 70% used guns.

People With Severe Mental Illness Are At High Risk For Serious Physical Disorders And Have Lower Life Expectancy

- People with severe mental illness are at high risk of serious physical health conditions and low life expectancy due to:
  - High rates of smoking, obesity, diabetes, and heart disease \(^1, 2\)
  - High rates of substance abuse (about 50% lifetime) \(^3\)
  - Lingering effects of homelessness and crime victimization \(^4\)
  - Poor access to adequate physical health care \(^5\)
  - Behaviors and lifestyles that increase health risk \(^6\)
  - High suicide rates (8.5 times the general population) \(^7\)

- They are also at elevated risk for dementia. \(^8\)

- People with severe mental illness often rely on special housing and on public income supports to be able to live in the community. \(^9\)

1. World Health Organization (Undated). “Premature Death Among People With Severe Mental Disorders” info_sheet.pdf (who.int)
Misuse Of Alcohol, Medications, And Illegal Substances Can Be Extremely Dangerous To Older Adults

- Nearly 1 million adults aged 65 and older live with substance use disorder as reported in 2018 data.\(^7\)
- Approximately 14.5% of older adults consume more alcohol than is recommended by health authorities\(^1\) with high risks of falls\(^3\) and other accidents as well as physical illnesses.
- An estimated 3.6% to 7.2% of older adults age 50+ used illegal drugs between 2002-2012, including heroin, cocaine, methamphetamine and cannabis.\(^1, 4\)
- The drug overdose epidemic has impacted everyone of all ages and has not left the older adult population untouched.\(^6\)
- Use of cannabis, the most commonly used “illegal” substance, is expected to rise due to relatively higher use by the baby boomer population and to the legalization of cannabis for medical and recreational purposes.\(^2, 3\)
- Prescription opioids sometimes result in addiction, overdoses, and later heroin use.\(^5\)
- The misuse of prescription and/or over-the-counter medications by older adults can result in injury, addiction, or death.\(^1, 4\)

Traumatic Brain Injuries Contribute To The Development Of Cognitive and Behavioral Health Conditions

• The incidence of traumatic brain injury is increasing. ¹, ², ³

• Traumatic brain injuries contribute to early development of dementia and other neurodegenerative disorders. ⁴

• Traumatic brain injuries contribute to the development of mood and anxiety disorders including PTSD. ⁵, ⁶

Many People With Developmental Disabilities Now Survive Into Old Age

Historically, people with developmental disabilities died at younger ages.

- Recently, individuals with developmental disabilities have experienced a dramatic increase in lifespan.

- The average life expectancy for people with a developmental disability was 22 years in 1931, compared to 62 years for the general population.¹ Now, their average life expectancy is 70, which is approaching that of the general population, about 79 years in 2018.¹,²

Emotional Reactions To Adverse Life Circumstances, Including Social “Determinants” and Personal Trauma

Emotional Reactions May Include:

- Grief
- Fear for self or loved ones
- Loneliness/sense of isolation
- Economic distress
- Loss of a sense of control
- Sense of uncertainty
- Sense of helplessness
- Sadness and hopelessness
- Demoralization
- Apathy
- Anger

- Stress from experiencing bigotry and injustice
- Stress for working parents
- Stress for grandparents
- Stress for family caregivers
- Family tension and violence
- Overuse of alcohol and/or drugs
- Exacerbation of pre-existing mental conditions
- Sleep disturbance
- Eating disturbance
- Thoughts of suicide
Developmental Emotional Challenges Of Old Age

- Retirement and other role changes
  - Finding meaningful activities
- Decreasing social connections and increasing social isolation as friends and family move away or die
  - Developing new relationships, including intimate relationships
- Dealing with loss and grief
- Living with declining physical and mental capabilities, with chronic health conditions, and with pain
- Tolerating increasing risk of dependency
- Reconciliation with one’s past despite regrets and disappointments
- Coming to terms with the inevitability of death

Co-occurring Disorders Are Highly Prevalent Among Older Adults Contributing To Higher Rates of Disability, Premature Death, and High Medical Costs

- Types of co-occurring conditions
  - Co-occurring dementia and neuro-psychiatric symptoms including depression and anxiety\(^1,2\)
  - Co-occurring types of mental disorders, e.g., depression and anxiety\(^3\)
  - Co-occurring mental and substance use disorders\(^4\)
  - Co-occurring acute/chronic physical and behavioral health conditions\(^5,6,7\)

- Older adults with co-occurring disorders are at high risk for premature disability and death\(^8\)

- Older adults with co-occurring disorders require more care leading to high health care costs\(^9\)

5. Dual Diagnosis Among Older Adults: Co-Occurring Substance Abuse and Psychiatric Illness: Journal of Dual Diagnosis: Vol 2, No 3 (tandfonline.com)
Despite Common Emotional Challenges In Old Age, Psychological Well-Being Is The Norm And Older Adults Are Often A Resource Rather Than A Burden\(^1, 2\)

- Personality traits that support well-being include: a positive attitude, optimism, adaptability, and resilience.
- Satisfying social relationships are a key element of well-being.
- Engaging activities that provide pleasure and/or meaning are also key to well-being:
  - Grandparenting
  - Volunteering or working for pay
  - Civic/political activity
  - Creative arts
  - Self-improvement: education, hobbies, including sports
- A sense of self-worth is a key element of psychological well-being.
- Self-care: exercise, eating well, sleeping well
- Yoga, meditation, and other “complementary” practices can contribute to well-being

POPULATIONS AT HIGH RISK OF COGNITIVE AND BEHAVIORAL HEALTH CONDITIONS
The COVID-19 Pandemic Highlighted
The Psychological Vulnerability Of Many Older People

• Although fewer older adults report emotional distress in response to the pandemic than younger adults, nearly ½ report significant levels of distress and ¼ report symptoms of depression or anxiety disorders.

• Especially vulnerable older adults include but are not limited to:
  o Those with dementia and/or other disabilities
  o Those in long-term residential care
  o Those with pre-existing serious and persistent mental illness
  o Those with substance use disorders
  o Those confronting severe illness or death
  o Those in social isolation
  o Older adults who are Black, Indigenous, and/or People of color
  o People living in economic instability
  o Informal caregivers

Loneliness And Social Isolation Increase Risks Of Physical, Cognitive, And Behavioral Disorders

- Social isolation significantly increases a person’s risk of premature death from all causes, a risk that may rival those of smoking, obesity, and physical inactivity.¹
- Social isolation is associated with about a 50% percent increased risk of dementia.¹
- Loneliness is associated with higher rates of depression, anxiety, and suicide.
- Poor social relationships are associated with a 29% increased risk of heart disease and a 32% increased risk of stroke.¹
- Loneliness among heart failure patients is associated with a nearly 4 times increased risk of death, 68% increased risk of hospitalization, and 57% increased risk of emergency department visits.¹

Family caregivers of people with mental disabilities are at high risk for anxiety disorders, depression, and burn-out.

- Family members and friends provide most basic care for people with:
  - Dementia
  - Psychiatric Disabilities Due to Severe Mental Disorders
  - Autism and Other Developmental Disabilities

- Informal caregivers are at high risk for depression, anxiety disorders, physical ailments and burn-out, resulting in premature institutionalization.

- Informal caregivers’ ability to provide care diminishes as they age, particularly if they develop disabilities themselves.

Cognitive And Behavioral Health Disorders Are Highly Prevalent In Nursing Homes And Assisted Living Facilities

- **Nursing Homes**
  - About 2/3 of nursing home residents are cognitively impaired.
  - Most of those with cognitive impairment also have neuropsychiatric symptoms.
  - Many nursing home residents have a primary diagnosis of serious mental illness.

- **Assisted Living Facilities**
  - About 2/3 of those in assisted living have some dementia, most with co-occurring neuropsychiatric symptoms.
  - Over 20% have a psychiatric disorder other than dementia or cognitive impairment.

Black And Latinx Older Adults Are At Higher Risk Of Developing Dementia. They Also Have More Limited Access To Behavioral Health Services.

• **Dementia**
  - Black older adults are about two times, and Latinx older adults are about one and one-half times, more likely than Whites to have Alzheimer’s and other dementias.¹
  - Although the rate of Alzheimer’s and other dementias among Black and Latinx older adults is higher than among Whites, they are less likely than Whites to have a diagnosis of the condition.¹
  - Physical conditions, such as high blood pressure and diabetes, rather than genetic factors, appear to account for the greater prevalence of Alzheimer’s among Black and Latinx older adults.¹
  - It is likely that improved access to high quality health care could reduce the prevalence of dementia among Black and Latinx older adults.¹

• **Mental and Substance Use Disorders**
  - Rates of mental illnesses among Black Americans are similar with those of the general population. Rates for Latinx-Americans is somewhat lower. However, both Latinx and Black older adults generally receive poorer quality of care than White non-Hispanic older adults and lack access to culturally competent care.²
  - Rates of substance use disorders among these populations are about the same as White non-Hispanic older adults. Studies of disparities in the use of public behavioral health services reveal complex patterns of use and completion of services that vary by race, ethnicity, and socio-economic status.³

Poverty Is Associated With Increased Risk Of Dementia, Mental Illness, and Suicide

• Poverty is associated with increased risk of dementia. There may be intervening variables such as poor diet and loss of control of finances due to dementia. ¹, ²

• People living in poverty are at higher risk for developing mental illness, and people with mental illness are at higher risk of becoming impoverished, a “vicious cycle”.²

• People living in neighborhoods with high rates of poverty have less access to physical and behavioral health care.³

• Mental illness is associated with lower levels of household income. ⁴

• Suicide rates in the U.S. are closely correlated to poverty rates. ⁵

4. Sareen, et al. Relationship Between Household Income and Mental Disorders Findings From a Population-Based Longitudinal Study
Women Are At Higher Risk Than Men For Some (But Not All) Cognitive and Behavioral Health Disorders

- As they age, **women become more at risk of social isolation** than men.\(^1\)
- **Women are at higher risk of dementia** than men & at risk of faster decline after diagnosis 2
- **Women are at higher risk than men of anxiety and depression** but of **lower risk of substance use disorders.**\(^3\)
- **Women are 1.75 times more likely than men to attempt suicide.**\(^4\)
- **Older men are almost 5 x more likely to complete suicide than are women.**\(^5\)

---

Older Adults Are At High Risk For Trauma Which Increases Risks for Dementia and Mental Disorders

- 10-15% of older adults are victims of elder abuse \(^1,\,^2\)

- Many older adults experience other forms of trauma, such as injuries from falls and deaths of loved ones \(^3\)

- Traumatic experiences in old age can result in PTSD and other anxiety and mood disorders \(^3\)

- PTSD contributes to the development of dementia and vice versa. \(^4\)

- People with dementia are at increased risk of elder abuse. \(^5\)

Veterans Are At Significant Risk Of Complex, Co-Occurring Physical, Cognitive, And Behavioral Disorders

• Older veterans have co-occurring medical, mental health, and substance use disorders, and cognitive impairments more frequently than younger veterans. ¹

• Rates of post-traumatic stress disorder (PTSD) are highest among Vietnam-era veterans. ¹

• In 2018, the rate of suicide among veterans was 32.0 per 100,000, compared with 17.2 per 100,000 for nonveterans. ²

• Alcohol and substance use disorders are more common among veterans than non-veterans and frequently co-occur with mental disorders, especially PTSD. ³

• Despite higher rates of PTSD, older veterans are less likely to seek mental health services, than younger veterans. ¹

• This willingness to seek services will likely continue as this cohort ages and will require a system designed to support the increased care needs of the aging veteran population. ¹

Sources:
Older LGBTQ+ Are Less Likely To Be Diagnosed And Treated For Cognitive Impairment And At Higher Risk For Behavioral Health Disorders

• Older LGBTQ+ individuals are more likely to experience emotional distress leading to anxiety, depression and substance use due to lifetime exposure to stigma and discrimination.¹

• Older LGBTQ+ individuals are less likely to get adequate cognitive and behavioral health care including culturally competent diagnosis and treatment.³

• Older LGBTQ+ individuals are less likely to receive informal caregiving due to being less likely to have children and having smaller social support networks.², ³

• Outcomes vary greatly depending on geography, race, economic status, education and specific sexual and gender identities.

There are 2.7 Million LGBTQ+ Adults over the age of 50 in the US.²

PROJECTED GROWTH OF OLDER ADULTS WITH COGNITIVE AND/OR BEHAVIORAL HEALTH CONDITIONS
In The Next Decade In NYS, The Number of People 65+ With Dementia Will Increase By 100,000 (Over 25%)
During the Next Decade in NYS, the number of adults 65+ with a mental health condition will increase by about 175,000 (25%).

Projected Growth of 65+ Population with a Mental Health Condition in New York State: 2020-2040

During The Next Decade In NYS The Number Of Older Adults With Anxiety Disorders Will Grow By 120,000 (25%)

Population of Adults 65 and Older in NYS Presenting with Any Anxiety Disorder: Projection 2020-2040

During The Next Decade In NYS The Population 65+ With Major Or Minor Depression Will Grow 25%

Population of Adults 65 and Older in NYS Presenting with Major or Minor Depression: Projection 2020-2040

During The Next Decade In NYS The Population Of Older Adults 65+ With Psychotic Conditions Will Increase By 25,000 (Nearly 25%)

Population of Older Adults Ages 65+ with Psychotic Symptoms (3% Prevalence ¹) in NYS: Projection 2020-2040 ²

During The Next Decade In NYS, The Number Of People 65+ With Substance Use Disorders Or Who Misuse Alcohol, Medications, Or Illegal Substances Will Grow 25%

In NYS From 2011 To 2019, The Rate Of Overdose Deaths Among Older Adults Rose 236%
ACCESS TO QUALITY CARE AND TREATMENT REMAINS INADEQUATE
Older Adults With Cognitive Impairment Have Extensive Unmet Needs

- People with cognitive impairment and their family caregivers have high rates of anxiety disorders, depressive disorders, as well as physical disorders. ¹, ²

- Unmet needs for people with dementia living in the community and their caregivers include: ³, ⁴
  - More extensive screening for functional abilities, neuropsychiatric symptoms, misuse of substances, safety, and pain
  - Early disclosure of diagnosis to people with dementia and their family to enable advance care planning
  - Education, support, and behavioral health care for family caregivers
  - Training for primary care physicians and gerontologists in diagnosis, treatment (including more cautious use of medications), and the use of motivational techniques to promote healthy aging
  - Neuropsychiatric behavior management
  - Daily/meaningful activities
  - Home and personal safety provisions
  - Medical condition management

Most Older Adults With Mental Disorders Do Not Get Treatment

Older Adults Are Half As Likely To Be Served In NYS’s Public Mental Health System As Are Children Or Adults

New York State Office of Mental Health Statewide Comprehensive Plan 20016-2020. 5.07 Plan_FINAL DRAFT (ny.gov)
Most Older Adults With Mental Illnesses Do Not Get Even Minimally Adequate Mental Health Services

• Treatment by primary care physicians is not minimally adequate 87.3% of the time.¹
• Treatment by mental health professionals is not minimally adequate 51.7% of the time.¹
• Older adults are less likely to get health care in mental health specialty settings than other age groups.²
• In-home service providers, such as home health aides, are rarely trained to identify or treat mental disorders.²
• Community service providers in senior centers, adult day care, etc. are rarely trained in identification or treatment.²
• Mental health care in nursing and adult homes is also uneven. Overuse of anti-psychotic medications is common and dangerous.²

2. Institute of Medicine (2012). *The Mental Health and Substance Use Workforce for Older Adults: In Whose Hands?* The National Academies Press. [The Mental Health and Substance Use Workforce for Older Adults: In Whose Hands? | The National Academies Press (nap.edu)](https://doi.org/10.17226/22166)
Barriers To Care And Treatment Of Older Adults With Behavioral Health Conditions

- Shortages of clinically, culturally, and geriatrically competent providers
- Over reliance on primary care providers without adequate training
- High out of pocket cost
- Inadequate public information about where and how to get services
- Transportation problems to reach service sites
- Shortages of services in rural areas
- Shortages of in-home services
- Shortages of outreach and engagement services
- Shortages of bi-lingual providers
- Low perceived need
- Stigma
- Cultural preferences regarding sources of help

- The use of tele-health services during the pandemic has significantly improved access, but such services are less available to older adults than younger due to issues of broadband access, ownership of needed equipment, and ability to use it.

The Workforce For Geriatric Cognitive And Behavioral Health Is Too Small And Not Keeping Pace With Population Growth

• **Actions Needed To Address Workforce Shortages**

  • Increase and improve the geriatric workforce with financial and other **incentives** to work with older adults as well as by providing increased training. 2
  • Because it is not possible to train enough geriatric cognitive and behavioral health specialists, it is necessary to **change the workforce paradigm** and to train primary care clinicians, social service providers, paraprofessionals, peers, volunteers, etc. to identify needs and provide care.3, 4
  • Increase the use of **internet and related technology**. 3
  • Provide increased **support for family caregivers**, who are the primary de facto workforce for people with mental disabilities. 5

An Agenda For Improved Cognitive And Behavioral Health Policy

1. Provide services to support community integration ("aging in place").
2. Improve long-term care—nursing homes, assisted living, and home and community-based services.
3. Increase cognitive and behavioral health service capacity to keep pace with the growth of the older population and to address current shortfalls.
4. Enhance access to care particularly with extensive use of telehealth.
5. Improve quality of care emphasizing clinical, cultural, dementia, and geriatric competence in service design and delivery.
6. Increase and improve the professional and paraprofessional workforce and change the workforce paradigm to create clinical, cultural, and geriatric competence in the primary care, long-term care, behavioral health, and social service workforces.
7. Enhance integration of care within and between separate service “systems”—dementia care, behavioral health care, long-term health care, and aging social services.
8. Enhance support for family caregivers.
9. Address social “determinants” of behavioral health, such as racism, poverty, and isolation.
10. Improve public and professional education.
11. Increase and redesign funding to meet the needs of older adults.
12. Develop a publicly accessible data dashboard for planning purposes.
